

PRODUCT SHEET

RIVERINFO.EU

Current river flow conditions with forecasts, based on open data. Riverinfo.eu is an example of how data from the HYPE data delivery services can be visualized. The data delivery services can be purchased by any service providers that would benefit from current river flow conditions, with forecasts.

Get the full overview of pan-European river data with Riverinfo.eu, an example of an extensive data delivery service that:

- Can provide river flow data with 10-day forecasts for any point in Europe.
- Can be used to visualize watersheds and river network works in maps.
- Is based on open data and can be delivered worldwide.

HOW CAN THIS DATA DELIVERY SERVICE BE USED?

Riverinfo.eu is an example, similar to weather applications on the web, only it presents river data instead of weather data. Unlike most weather applications however, it compares the present situation with historic data to determine if river flow is under/over the normal range. This feature is useful to water managers involved in water quality sampling as well as other activities in/around rivers. Riverinfo.eu supports intelligent water-sampling and the development of cost-effective monitoring programmes.

GET DATA FOR YOUR OWN SERVICE!

Riverinfo.eu presents data from a pan-European hydrological model (E-HYPE), which is delivered by HYPE Data Delivery Service.

Further information on how you can access the data can be found at [HYPE Data Delivery Services](#)

Riverinfo.eu has been developed as a part of the SWITCH-ON project, funded by the European Union's Seventh Programme for research, technological development and demonstration under grant agreement No. 603587.
