

HyCAW: Hydrological Change Adaptation Wizard

Changes in temporal and total water availability due to hydrologic and climate change require an efficient use of resources through the selection of the best adaptation options and water saving strategies.

HyCAW provides a user friendly decision support systems able to assist water managers in:

- evaluating the monthly reduction of water availability induced by climate change
- selecting the best adaptation options and visualize the benefits in terms of water balance and cost reduction
- quantify potential improvements in water use efficiency

Is your business highly water demanding?
Do you need to cope with hydrological and climate change?
